DESCRIPTION:

Starlink is a satellite internet constellation operated by SpaceX providing satellite internet access to most of the Earth. Our project focuses on creating a small scale Starlink to understand the possible networking aspects and challenges faced.

PERFORMANCE METRICS:

(1) Latency

Latency is a measure of delay. In a network, latency measures the time it takes for some data to get to its destination across the network. It is usually measured as a round trip delay - the time taken for information to get to its destination and back again.

The round trip delay is an important measure because a computer that uses a TCP/IP network sends a limited amount of data to its destination and then waits for an acknowledgement to come back before sending any more. Thus, the round trip delay has a key impact on the performance of the network.

- **Latency = Propagation Time + Transmission Time + Queuing Time + Processing Delay** (Latency is usually measured in milliseconds (ms))
- Typical, approximate, values for latency that you might experience include:
 - I. 800ms for satellite
 - II. 120ms for 3G cellular data
 - III. 60ms for 4G cellular data which is often used for **4G WAN** and internet connections
 - IV. 20ms for an mpls network such as BT IP Connect, when using Class of Service to prioritise traffic

V. 10ms for a modern Carrier Ethernet network

(2) Packet loss:

Examines how many data packets are dropped during data transmissions on your network.

The more data packets that are lost, the longer it takes for a data request to be fulfilled.

(3) Throughput:

- Measures your network's actual data transmission rate, which can vary wildly through different areas of your network. Indicates the percentage of data packets that are successfully being sent; a low throughput means there are a lot of failed or dropped packets that need to be sent again.
- **Throughput = TransferSize / TransferTime**
TransferTime = RTT + 1/Bandwidth x TransferSize
- Round Trip Time (RTT) - time taken for a very small packet to travel across the network and return

(4) PROPAGATION TIME :

- Time required for a bit to travel from the source to the destination.
- **Propagation time = Distance / Propagation speed**
-

- In wireless communication, $s=c$, i.e. the **speed of light**. In **copper wire**, the speed s generally ranges from $.59c$ to $.77c$.

NEED FOR NETWORKING IN AN ISP OFFICE:

File sharing: A network makes it easy for everyone to access the same file and prevents people from accidentally creating different versions.

Printer sharing: If you use a computer, chances are you also use a printer. With a network, several computers can share the same printer. Although you might need a more expensive printer to handle the added workload, it's still cheaper to use a network printer than to connect a separate printer to every computer in your office.

Communication and Collaboration: It's hard for people to work together if no one knows what anyone else is doing. A network allows employees to share files, view other people's work, and exchange ideas more efficiently. In a larger office, you can use email and instant messaging tools to communicate quickly and to store messages for future reference.

Organization: A variety of scheduling software is available that makes it possible to arrange meetings without constantly checking everyone's schedules. This software usually includes

other helpful features, such as shared address books and to-do lists.

Remote access: Having your own network allows greater mobility while maintaining the same level of productivity. With remote access in place, users are able to access the same files, data, and messages even when they're not in the office. This access can even be given to mobile handheld devices.

Data protection: You should know by now that it's vital to back up your computer data regularly. A network makes it easier to back up all of your company's data on an offsite server, a set of tapes, CDs, or other backup systems.

1. **Type of Network** : WAN [Wide Area Network]

2. **Client Configuration** :

10th Gen Intel® Core™ i5-10600KF processor(6-Core, 12M
Cache, 4.1GHz to 4.8GHz)
8GB, 1x8GB, DDR4, 2666MHz
512GB M.2 PCIe NVMe Solid State Drive
500W Chassis

3. **Server Configuration** :

Database Server:

PowerEdge R340 Server

PowerEdge R340 MLK Motherboard

Intel® Xeon® E-2224 3.4GHz, 8M cache, 4C/4T, turbo (71W)

16GB UDIMM, 3200MT/s, ECC

18TB Hard Drive SATA 6Gbps 7.2K 512e 3.5in Hot-Plug

On-Board Broadcom 5720 Dual Port 1Gb LOM

Print Server:

5th Gen Intel® Core™ i5-5500K processor(4-Core, 6M Cache,
3.5GHz to 4.1GHz)

8GB, 2x4GB, DDR3, 1333MHz

4TB Seagate NAS grade Hard Disk Drive

300W Chassis

FTP Server:

5th Gen Intel® Core™ i5-5500K processor(4-Core, 6M Cache,
3.5GHz to 4.1GHz)

8GB, 2x4GB, DDR3, 1333MHz

18TB Seagate NAS grade Hard Disk Drive

300W Chassis

Mail Server:

7th Gen Intel® Core™ i7-7700K processor(4-Core, 10M Cache,
3.7GHz to 4.1GHz)

8GB, 2x4GB, DDR4, 2666MHz

1TB Seagate Barracuda Hard Disk Drive
400W Chassis

Proxy Server:

7th Gen Intel® Core™ i7-7700K processor(4-Core, 10M Cache,
4.1GHz to 4.4GHz)
8GB, 2x4GB, DDR4, 2400MHz
1TB Seagate Western Digital Black Hard Disk Drive
400W Chassis

Application Server:

HPE ProLiant DL325 Gen10 Plus v2 server with one AMD
EPYC™ 7313P Processor,
32 GB DDR4 2666 MHz ECC memory,
HPE Smart Array P408i-a SR Gen10 Controller,
Eight small form factor drive bays - 20TB Seagate Enterprise
Hard Disk Drives
500W power supply

CDN Server:

HPE ProLiant DL345 Gen10 Plus server with one AMD EPYC™
7232P Processor
32 GB memory,
HPE Smart Array P408i-a SR Gen10 Controller,
Eight small form factor drive bays - 40TB Seagate Enterprise
Hard Disk Drives
500W power supply

4. Types of Servers :

- Database server
- Print server
- FTP server
- Mail server
- Proxy server
- Application server
- CDN servers

5. Network Medium : Wireless / Coaxial cable / Fiber optical cable

6. Topology : Hybrid (mesh/star)

7. Departments and number of users :

- Customer care = 10 users
- Manager = 1 user
- Software Team = 20 users
- Network Team = 15 users
- Marketing team = 10 users

8. Description for each department :

- **Customer care :**

Handling feedback and complaints from customers.
Responsible for establishing the relationship between the company and the public.

- **Manager :**

In charge of that particular branch. Responsible for planning, organizing, leading and controlling all the departments belonging to that branch.

- **Software Team :**

Web app management. Responsible for designing and maintaining web pages and applications related to the company.

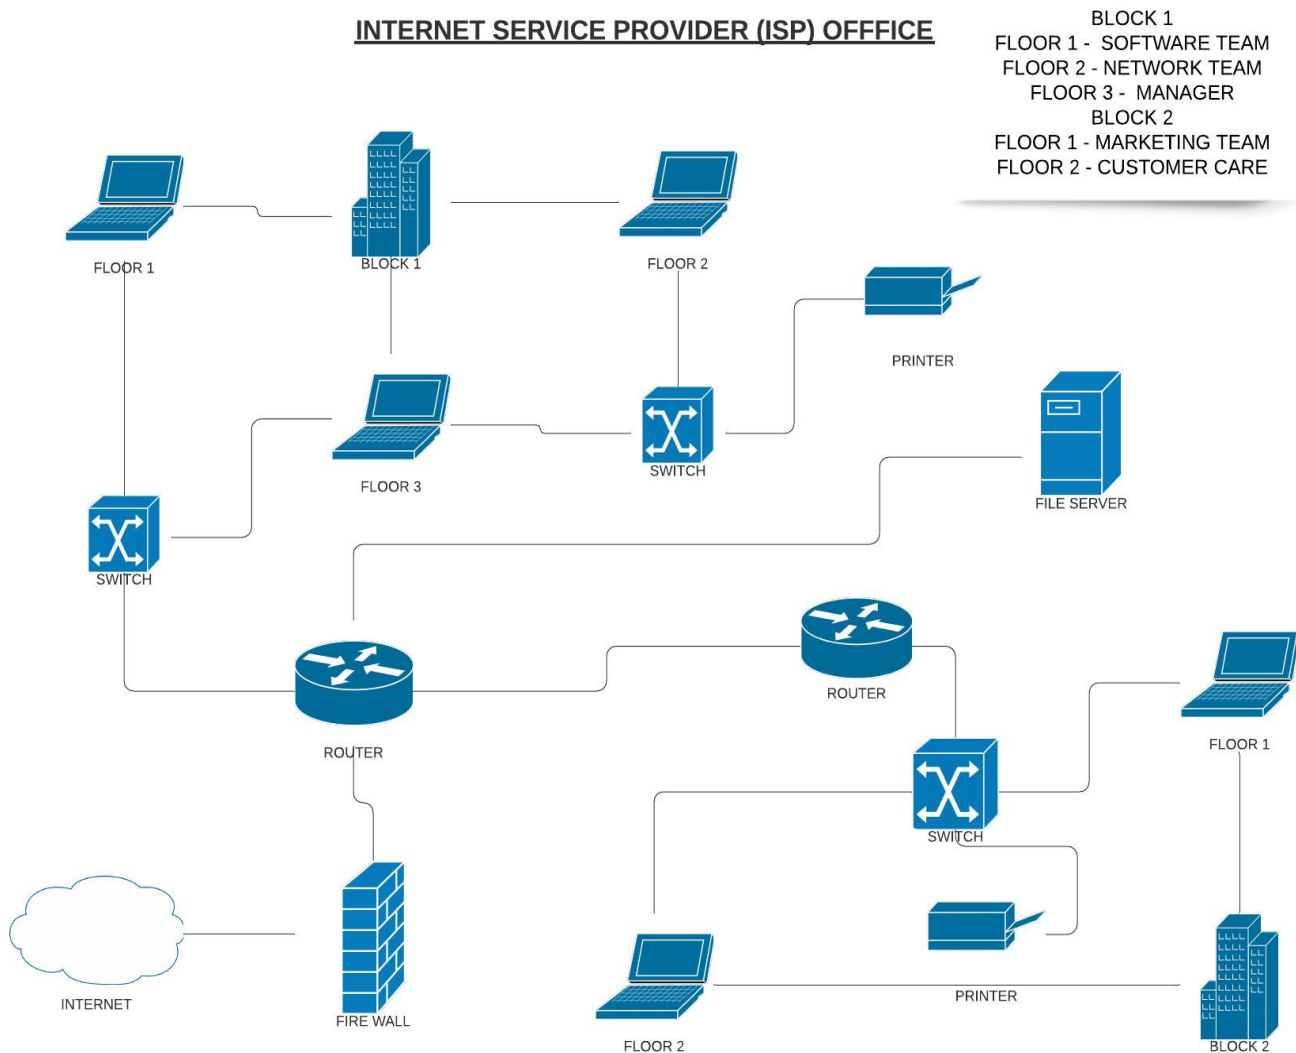

- **Network Team :**

Provide networking services to the other employees, customers and troubleshoot any problem that arises related to connections. Responsibility for setting up, developing and maintaining computer networks within an organisation.

- **Marketing team :**

Promoting the business. Responsible for creating and disseminating images, messages and ideas that best communicate the company value.

9. Architecture diagram :

FILE HANDLING OPERATIONS USING SOCKET PROGRAMMING:

A. DESCRIPTION OF THE FILE:

SalesFile.csv

SalesFile.csv contains the sales report of the **internet connections sold** to different **countries** over the **years** and calculates the **total revenue** based on sales. It also has the **month of peak sale**. SalesFile.csv aims in the analysis of data to predict and increase the connections provided.

	A	B	C	D	E	F
1	Year	Country	Number	NetReven	MonthOfPeakSale	
2	2015	United Sta	123		aug	
3	2015	China	345		jan	
4	2015	India	343		sep	
5	2015	Croatia	233		jun	
6	2015	Morocco	545		jul	
7	2015	Nigeria	234		feb	
8	2015	Egypt	254		jan	
9	2015	Russia	215		may	
10	2015	Turky	234		jan	
11	2015	Albania	90		apr	
12	2016	United Sta	322		sep	
13	2016	China	234		jan	
14	2016	India	234		jan	
15	2016	Croatia	532		jun	
16	2016	Morocco	893		jul	
17	2016	Nigeria	424		feb	
18	2016	Egypt	322		jan	
19	2016	Russia	344		jan	
20	2016	Turky	90		feb	
21	2016	Albania	99		jul	
22	2017	United Sta	634		jan	
23	2017	China	872		ian	

```
file = pd.read_csv(FILE)
print(file.info())
```

```
<class 'pandas.core.frame.DataFrame'>
RangeIndex: 70 entries, 0 to 69
Data columns (total 5 columns):
#   Column          Non-Null Count  Dtype
---  -
0   Year             70 non-null    int64
1   Country          70 non-null    object
2   Number           70 non-null    int64
3   NetRevenue       0 non-null     float64
4   MonthOfPeakSale  70 non-null    object
dtypes: float64(1), int64(2), object(2)
memory usage: 2.9+ KB
None
```

B. LIST OF OPERATIONS COMPLETED WITH THE FILE

1. Sales Analysis Graph:

Minimum and maximum connections sold grouped by year

2. Net Revenue Calculation:

A simple calculation of the total revenue (Number*\$99)

3. Add Attributes:

Addition of new features for future sale analysis

Router#
Router#
```

Below the CLI window, there is a status bar with the text "Ctrl+F6 to exit CLI focus" and two buttons: "Copy" and "Paste". At the bottom left, there is a checkbox labeled "Top".

Communication between Different departments using OSPF routing:

Fire	Last Status	Source	Destination	Type	Color	Time(sec)
	Successful	B3	E1	ICMP		0.000
	Successful	E4	B2	ICMP		0.000
	Successful	A2	B5	ICMP		0.000

Fire	Last Status	Source	Destination	Type	Color	Time(sec)
	Successful	C8	D2	ICMP		0.000
	Successful	C3	B8	ICMP		0.000
	Successful	D2	B8	ICMP		0.000

RIP - V1: (Default Version)

The Gateway addresses (Routers):

170.18.10.9/29

170.18.10.17/28

170.18.10.33/28

170.18.10.49/28

170.18.10.65/29

Belongs to class B in classful addressing and advertises each other with their default subnet mask (/16)

When a router learns multiple routes to a specific network via multiple routing protocols, it installs the route with the lowest distance in the routing table.

If the router receives and installs multiple paths with the same distance, **load-balancing** can occur.

CLASSFUL RP	CLASSLESS RP
<ul style="list-style-type: none"> ● RIP V1 	<ul style="list-style-type: none"> ● RIP V2 ● OSPF

CLOUD CONCEPTS:

Cloud computing is the **on-demand** delivery of storage, applications, database and other IT resources via the internet with **pay as you go** pricing

Hardware -> Software

- Type 1 Hypervisor - runs directly on the host machine's physical hardware
- Type 2 Hypervisor - installed on top of an existing OS

GobackN and Selective Repeat

Write a program to simulate Go back N and Selective Repeat Modes of Sliding Window Protocol in peer-to-peer mode and demonstrate the packets captured traces using Wireshark Packet Analyzer Tool for peer-to-peer mode.

CODE:

Server.java
